**RE: Massachusetts Water Resources Authority NPDES Permit Number MA0103284 –
Summary Report of MWRA Demand Management Program for Fiscal Year 2022**

Dear Mr. Borci and Ms. King:

In compliance with the requirements of MWRA's NPDES Permit MA0103284 - Part I, Item 10.c (page 14 of 32), please find enclosed: Summary Report of MWRA's Demand Management Program for Fiscal Year 2022.

Should you require additional information, please contact Stephen Estes-Smargiassi, Director of Planning and Sustainability at Stephen.Estes-Smargiassi@mwra.com.

Sincerely,

David W. Coppes, P.E.
Chief Operating Officer

Summary Report of MWRA Demand Management Program For Fiscal Year 2022

This report is organized into four sections, as follows:

1. Summary
2. Background and Long Range Water Supply Program
3. Ongoing MWRA Demand Management Programs and Activities During Fiscal Year 2022
4. Demand Management Plans for Fiscal Year 2023

1. Summary

This report has been prepared to meet the requirements of the Massachusetts Water Resources Authority’s NPDES Permit MA0103284 - Part I, Item 10.c (page 14 of 32). The purpose of the demand management section (including water conservation) in MWRA’s NPDES permit is to help maintain the dry day wastewater flow to the Deer Island Wastewater Treatment Plant below the 436 million gallons per day (mgd) permit limit. MWRA’s wastewater flow is derived from three flow components: sanitary flow, groundwater infiltration, and stormwater inflow. The demand management program will help reduce the sanitary component of wastewater flow as well as provide benefits to the water system and source watersheds. Information on reduction of infiltration and inflow is provided in MWRA’s Annual Infiltration and Inflow (I/I) Reduction Report for Fiscal Year 2022 (submitted under separate cover letter).

MWRA has maintained the 365 calendar day running average dry day wastewater flow well below the 436 mgd permit limit and well below the 415 mgd trigger (see NPDES Permit Part I, Item 10.a and 10.b). For Fiscal Year 2022 (ending June 30, 2022), the 365-calendar day running average dry day flow to the Deer Island Wastewater Treatment Plant was 297.0 mgd; dry day flow has averaged about 276.8 mgd over the last ten years (see Table 1). The dry day flow is reported monthly by MWRA as part of the NPDES Operational Performance Summary.

**Table 1: 365-Calendar Day Running Average
Dry Day Wastewater Flow FY13 to FY22**

Fiscal Year	Running Dry Day Flow (mgd)
2013	271.7
2014	267.8
2015	273.9
2016	261.1
2017	270.6
2018	272.7
2019	307.9
2020	282.9
2021	262.0
2022	297.0
Ten Year Average	276.8

MWRA continues to implement effective water demand management policies and programs for the MWRA-owned distribution system, as well as member community-owned distribution systems. The following provides an overview of demand management actions taken during FY22. Background information and details on each program are provided in other sections of this report.

- Leak detection survey of 206 miles of MWRA distribution main and subsequent leak repairs, saving approximately 0.92 mgd of water;
- Leak detection survey of 2,970 miles of member community distribution main in 27 communities, and subsequent leak repairs, saving approximately 17.3 mgd of water;
- \$32 million in interest-free loans to fund 18 local community water system rehabilitation projects, providing 12 miles of new water main and 6 miles of cleaned and lined water main;
- Distribution of 4,145 water saving fixtures (low-flow showerheads and faucet aerators), installation instructions, and leak detection dye tablets;
- Distribution of over 44,384 pieces of water conservation literature; and,
- MWRA School Education Program performed 192 classroom presentations (80 of which were virtual classroom presentations) reaching 5,791 students in the service area.

The continued effectiveness of MWRA’s conservation efforts over the past year is demonstrated by the fact that baseline water demand (MWRA reservoirs withdrawals) continues to remain stable and is comfortably below the system’s safe yield of 300 mgd (see on Figure 1) even with the addition of new communities and growth within the service area.

Figure 1: MWRA Reservoir Withdrawals (5 year running average)

For Calendar Year 2021, water demand was 192 mgd. Table 2 provides data on water use and wastewater generation over the most recent ten-year period (calendar year data). The “Water Demand (Withdrawals)” data represents total water withdrawals from MWRA reservoirs. The “Wholesale Water Sales” data represents water sold by MWRA to all 53 fully and partially supplied communities (serving a population of about 2.7 million). “Total Wastewater Generation” data represents the total flow to the Deer Island Treatment Facility from all 43 member sewer communities (a sewered population of about 2.3 million). The “Dry Day Wastewater Generation” data represents flow to the Deer Island Treatment Facility during only dry days as defined in MWRA’s NPDES Permit. Note that MWRA provides water and/or sewer service to a total of 61 communities (3.1 million people), but not all communities are both water and sewer members. A complete listing of water and sewer communities, as well as, considerable additional data on MWRA demand management and water conservation programs can be found on MWRA’s website at www.mwra.com.

Table 2: MWRA Total Water Demand and Wastewater Generation

Calendar Year	Water Demand (Withdrawals)	Wholesale Water Sales	Total Wastewater Generation	Dry Day Wastewater Generation
2012	200 mgd	189 mgd	292 mgd	268 mgd
2013	202 mgd	192 mgd	318 mgd	263 mgd
2014	202 mgd	192 mgd	326 mgd	284 mgd
2015	207 mgd	197 mgd	295 mgd	256 mgd
2016	209 mgd	201 mgd	282 mgd	256 mgd
2017	196 mgd	183 mgd	318 mgd	280 mgd
2018	200 mgd	186 mgd	362 mgd	308 mgd
2019	192 mgd	180 mgd	334 mgd	295 mgd
2020	196 mgd	184 mgd	299 mgd	268 mgd
2021	192 mgd	182 mgd	347 mgd	305 mgd
10 Year Average	200 mgd	189 mgd	317 mgd	278 mgd

2. Background and Long Range Water Supply Program

The MWRA, an independent public authority, was established through legislation in 1985 to provide wholesale water and sewer services to 61 cities and towns. Some of the Authority’s goals, purposes and objectives relate directly to water demand management efforts, including:

- Efficient and economical operation of water delivery;
- Leak detection programs for member communities; and,
- Repair, replacement, rehabilitation, modernization and extension of the water delivery within the service area of the Authority.

From its inception, MWRA has made demand management/water conservation a high priority. In 1985, MWRA inherited a water system that had been exceeding its safe yield of 300 mgd for almost twenty years. In response to increasing water demand during the 60s, 70s and 80s, several water supply studies were undertaken by MWRA’s predecessor agency, the Metropolitan District Commission (MDC). These studies, collectively called the Long Range Water Supply Study - EIR 2020, projected the need for 70 mgd of additional supply by 2020 above a base demand of 340 mgd. The studies identified a series of supply development options including diverting of a portion of the Connecticut River’s flow.

Demand management options were also examined. In 1986, the MWRA Board of Directors, through a series of water policy decisions, opted to aggressively pursue demand management strategies rather than pursue options for increasing water supply. This commitment to demand management resulted in the implementation of a highly successful water conservation program that has been a role model for water conservation efforts both nationally and globally.

Long Range Water Supply Program

Following the commitment by the Board of Directors in 1986 to demand management, MWRA, in 1987, developed and launched its Long Range Water Supply Program (LRWSP). The LRWSP included 30 different recommendations to be completed over the next decade at a cost of tens of millions of dollars. The LRWSP demand management components were meant to reduce water use and water loss throughout the service area. During a three-year trial program from 1987-1989, MWRA, along with its member communities, initiated demand management efforts that reduced average demand from 326 mgd in 1987 to 285 mgd in 1990. This reduction put average demand below the water system's safe yield of 300 mgd for the first time in over 20 years. With this success, the LRWSP demand management components were continued beyond the trial program. A detailed discussion of the demand management activities developed from the LRWSP, covering the 1991 through 2000 period, was provided in the Fiscal Year 2000 MWRA Demand Management Report (available at <https://www.mwra.com/harbor/enquad/pdf/2000-ms-61.pdf>).

Drought Management Plan

In addition to long range planning, the need for a short-term drought management plan was made clear after two years of below average precipitation and overuse of the Quabbin-Ware-Wachusett system. This situation led to a potential drought warning in the 1988-1989 period. The MWRA Drought Management Plan was submitted to the Massachusetts Department of Environmental Protection and approved in 1989. Shortly thereafter, precipitation returned to normal and the reservoirs rose back to their normal levels. In Spring 2000, MWRA was involved in the Massachusetts Drought Management Task Force's development of a state drought response plan. The plan, updated recently in 2019, outlines agency responsibilities during a drought period and sets drought stage triggers based on hydrologic conditions. The plan is regionally flexible. For example, small water systems may need water use restrictions during a short-term drought period while the MWRA service area would avoid restrictions due to the large storage volumes in the Wachusett and Quabbin Reservoirs. Only a long-term drought, more severe than the 1960's drought of record, would lead to restrictions in the MWRA service area. The plan also retains responsibilities for MWRA's direct lines of communication with member communities and customers during a drought. Given the multi-year response of MWRA's very large reservoirs, the MWRA Drought Response Plan continues to be acknowledged as separate under the state plan, with its own response triggers based on MWRA storage volumes.

During the recent drought period of 2015-2016, the MWRA system performed as expected, with storage levels in the Quabbin Reservoir slowly dropping from the seasonal Normal operating range into Below Normal. While many other water systems were severely affected by this drought, the MWRA system did not drop into a Drought Warning or lower stages, and was able to provide emergency or supplemental water to a number of communities. While MWRA's storage conditions did not require water use restrictions during this drought period, MWRA did provide public messaging on using water wisely. With the end of the drought, MWRA's reservoirs refilled and are in Normal operating range at this time. The MWRA system performed similarly in the recent, shorter drought of 2020-2021.

3. Ongoing MWRA Demand Management Programs and Activities During Fiscal Year 2022

Planning and Policies

In December 2018, MWRA completed an updated Water System Master Plan which is intended to serve as the framework for annual capital planning and budgeting decisions (Master Plan web link: <http://www.mwra.com/02org/html/masterplan.htm>). As part of this effort, staff documented supply and demand characteristics of the system to confirm that the 300 mgd safe yield of the MWRA water system is sufficient to meet future demand for water both within the service area and additional demand outside the service area, as may be approved. Staff used the following conservative demand planning scenario to arrive at this conclusion: continuation of current base demand in the existing MWRA service area of approximately 203 mgd (based on the 5-year average demand); projected increased demand from population and employment growth through 2040 within the existing MWRA service area of 29 mgd; and an allowance for the potential additional demand for MWRA water from partially served communities of 17 mgd. The conservative planning scenario represents a potential future demand of 249 mgd, well below the system safe yield of 300 mgd.

MWRA has adopted policies that establish stringent controls and a rigorous approval process for entities seeking admission to the MWRA water system or to use MWRA water on an emergency basis. These policies include:

- **OP.05, Emergency Water Supply Withdrawals.** This policy applies to communities outside MWRA's water service area that are seeking water on an emergency basis. The MWRA may approve emergency withdrawals for no more than six months at a time.
- **OP.09, Water Connections Serving Property Partially Located in a Non-MWRA Community** (also referred to as the "Water Straddle" policy). This policy applies to all parties seeking to obtain water for a location, building, or structure situated entirely outside the MWRA water service area but located on a parcel of land, under single ownership, and which is subject to an integrated plan for use or development, that is partly inside the MWRA's water service area.
- **OP.10, Admission of New Community to MWRA Water System.** This policy applies to communities seeking admission to the MWRA water system, and to state, county, institutional, and federal facilities seeking MWRA water for a location outside MWRA's water service area, as defined in MWRA's Enabling Act.

Demand management is also an important component of the regulations for MWRA's Continuation of Contract Water Supply (360 CMR 11.00) that is applicable to 27 communities that purchase water from the Authority under a cooperative contract basis. In addition, all communities that purchase water from MWRA are required to complete a leak detection survey and perform follow-up leak repairs of their entire distribution system at least once every two years (360 CMR 12.00).

MWRA Capital Projects from the Water Master Plan

Total prioritized water system needs identified in the 2018 Water System Master Plan (for FY19-58) are approximately \$2.6 billion including all projects currently in the Capital Improvement Program (CIP) and those recommended for consideration in future CIPs. The prioritization of projects in the Master Plan helps to develop MWRA's annual CIP documents.

Leak Detection and Repair of the MWRA Distribution System

The MWRA annual leak detection and repair program (initially established during 1988 to 1990) is performed by MWRA personnel. All MWRA water distribution pipes (334 miles) are surveyed on a regular maintenance schedule for leaks with repairs made promptly. During FY22, a total of 206 miles of MWRA-owned distribution main were surveyed for leaks. A total of 16 leaks were detected and 14 of those leaks were repaired, accounting for approximately 0.92 mgd of water savings¹. Table 3 lists data on the last ten years of leak detection on the MWRA distribution system.

Table 3: Leak Detection Work on the MWRA Distribution System

Period	Miles Surveyed	Number of leaks	Estimated leakage-mgd
FY13	140	13	0.16
FY14	141	42	0.50
FY15	160	37	0.40
FY16	174	29	0.40
FY17	140	22	0.45
FY18	126	34	0.85
FY19	144	20	0.50
FY20	102	24	0.44
FY21	191	22	0.71
FY22	206	16	0.92
10 Year Average	152	26	0.53

Leak Detection and Repair of Member Community Distribution Systems

To help communities identify leaks in their local distribution systems, a program providing a free one-time leak detection survey was established during 1988 to 1990. Based on the success of the initial program, MWRA developed leak detection regulations (360 CMR 12.00) that went into effect in July 1991. Communities that purchase water from MWRA are required to complete a leak detection survey of their entire distribution system at least once every two years. Communities can accomplish the survey in one of three ways: (1) using their own crews, (2) hiring their own leak detection contractor, or (3) using MWRA's task order leak detection services contract. Leak detection/repair work is generally cost effective as the value of the saved water often far exceeds the cost of the leak detection/repair work. During FY22, a total of 2,970 miles of local water pipeline were surveyed for leaks. A total of 286 leaks were detected and repaired in 27 community distribution systems, accounting for an estimated 17.3 mgd of water savings. Table 4 provides summary data for last 31 years of leak detection work on community water mains.

¹ All leaks are repaired as quickly as possible. Some leaks cannot be immediately repaired as they are on pipe segments, which cannot currently be shut down without severe service disruption. If those leaks are not deteriorating or causing damage, repair work may be delayed until MWRA or the affected community can make system changes to allow a shutdown.

Table 4: Leak Detection Work on Community Water Mains

Period	Miles Surveyed	Number of Leaks	Estimated Leakage	
			mgd	gpd/mile
FY92 & FY93	6227	1988	24.8	3900
FY94 & FY95	5924	1134	14.1	2400
FY96 & FY97	6013	1527	17.8	2900
FY98 & FY99	5924	1257	12.4	2100
FY00 & FY01	6650	928	9.3	1400
FY02 & FY03	6198	1032	8.6	1400
FY04 & FY05	6753	968	13.2	2000
FY06 & FY07	6871	833	8.5	1200
FY08 & FY09	7879	987	10.8	1400
FY10 & FY11	7219	722	10.3	1400
FY12 & FY13	7677	923	9.4	1200
FY14 & FY15	7403	1035	10.3	1400
FY16 & FY17	8320	830	8.9	1100
FY18 & FY19	7397	767	9.9	1300
FY20 & FY21	4843	462	5.5	1200
FY22	2970	286	17.3	5800
31 Year Average	3364	506	6.2	1035

Rehabilitation and Replacement of Member Community Water Distribution Systems

MWRA implemented the pilot Water Infrastructure Rehabilitation Financial Assistance Program in 1997-1999. This program provided \$30 million in 25 percent grants and 75 percent interest-free loans to member water communities for water system rehabilitation projects. Local projects implemented through this program resulted in the replacement of over 22,000 water meters and rehabilitation or replacement of over 80 miles of distribution pipeline. Water loss from both pipeline and valve leakage was reduced.

In November 1999, MWRA approved the Local Water System Assistance Program (LWSAP). This Program’s primary objective was improving water quality in community-owned distribution systems. In the Program’s Phase 1, \$222 million were distributed to MWRA water communities via ten-year, interest-free loans. In FY11, an additional \$210 million was added as Program Phase 2. In FY18 an additional \$292 million was added as Program Phase 3. This interest-free loan program helps local communities finance replacement and/or cleaning & lining of unlined water mains, as well as other water system upgrades. A secondary benefit of the program is the reduction of water pipeline leakage. Quarterly funding distributions under the LWSAP began in August 2000 (FY01). Including all phases of the Program since 1998, \$523 million has been distributed to 45 communities to fund 576 local projects. These projects provided a total of 422 miles of new lined water pipe and 189 miles of cleaning and lining of existing water pipe. Table 5 summarizes work performed as part of the Pilot and LWSAP water loan programs. In 2016, MWRA Board of Directors Approved \$100 million in funding to remove lead service lines. This program will not only help replace the lead services, but will also address leaks on the service lines.

Table 5: Pilot and Local Water System Assistance Programs Summary

Period	Funds Distributed	Projects Funded	Miles of New Pipe	Miles of Rehabilitated Pipe
FY98/99	\$30 million	85	42	39
FY01	\$17 million	32	18	22
FY02	\$16 million	19	22	6
FY03	\$16 million	18	16	9
FY04	\$19 million	22	24	4
FY05	\$20 million	24	17	15
FY06	\$17 million	17	7	4
FY07	\$26 million	25	18	14
FY08	\$10 million	19	13	12
FY09	\$23 million	18	15	12
FY10	\$22 million	21	18	7
FY11	\$18 million	23	13	9
FY12	\$22 million	31	33	4
FY13	\$37 million	36	32	3
FY14	\$23 million	22	19	5
FY15	\$20 million	21	15	4
FY16	\$16 million	17	12	3
FY17	\$22 million	20	16	2
FY18	\$31 million	31	18	1
FY19	\$36 million	21	14	2
FY20	\$20 million	18	11	2
FY21	\$30 million	18	17	4
FY22	\$32 million	18	12	6
TOTAL	\$523 million	576	422	189

Water Metering and Monitoring

Continued annual routine calibration and maintenance of the water revenue meters allows MWRA to track water use and accurately charge its wholesale customer communities. MWRA analyzes nighttime low flow water data and historical trends from the revenue meters to help member communities identify potential water leakage in local systems. During FY22, MWRA continued its ongoing program for operation and maintenance of the water metering system. All meters received routine calibration on a regular schedule.

Residential and Municipal Water Conservation

MWRA continues to provide low-flow device kits to member communities, housing authorities, development corporations, environmental organizations, and individual retail customers at no cost. The low-flow device kits meet EPA WaterSense specifications and include: 2.0 gallon per minute (gpm) showerheads, 1.5 gpm kitchen and bathroom faucet aerators, fixture installation instructions, and toilet leak detection dye tablets. MWRA also maintains its water conservation hotline (617-242-SAVE). During FY22, a total of 4,145 water saving fixtures were distributed to MWRA households and member community water departments.

Public Education Outreach

MWRA continues to provide public education material to communities and individual customers at no cost. Member communities are encouraged to distribute the water conservation information to retail customers. The primary information targeted for retail customers are indoor and outdoor water conservation brochures (printed & folded) to be used by member communities as retail bill inserts. MWRA also has developed a bill insert sized brochure titled: “Is There LEAD In Your Tap Water?”. MWRA provides all its brochures directly to communities, retail customers, watershed associations, environmental groups, etc. to fulfill their e-mail and telephone requests. During FY22, over 44,384 pieces of printed materials were distributed. MWRA periodically reminds communities, via letters/e-mails, that the bill insert educational brochures on indoor and outdoor water conservation and water conservation kits are available via a web based order form at no cost.

During FY22, MWRA continued its participation in the US EPA WaterSense program to help consumers save water for future generations and reduce costs on their utility bills. WaterSense aims to decrease indoor and outdoor water use through water-efficient products and simple water-saving practices. The program encourages customers to look for WaterSense labeled products, which have been independently certified for efficiency and performance, and promotes water-saving techniques that reduce stress on water systems and the environment. Information on the WaterSense Program is included on MWRA’s website (www.mwra.com).

During FY22, MWRA continued to provide the Annual Drinking Water Quality Report that is mailed to every household in the MWRA service area, a distribution of more than 912,000. While focused on water quality, the report also includes information on water conservation.

School Education

MWRA continues to promote water conservation awareness for young people. The ongoing School Education Program is designed to provide a science-based curriculum using a four step process: educational curriculum development, conducting classroom presentations, wide-spread teacher training with continual follow-up, and support to educators including distribution of thousands of coloring books, bookmarks and water conservation guides. Educational materials have been designed for students from the elementary level to the high school level. During FY22 (2021/2022) school year, MWRA’s School Education Outreach Program (including water conservation information) performed 192 classroom presentations (80 of which were virtual classroom presentations), reaching 5,791 students in pre-kindergarten through college level classes in 23 communities. In addition to classroom presentations, the MWRA School Education Program conducted/participated in Teacher Training Workshops. These workshops provided teachers the resources and tools needed to perform follow-up educational activities in their classrooms.

The School Education Program again sponsored a Poster & Writing Contest. Students are asked to use their creative skills to create a poster and/or write an essay, story or poem explaining what a clean Boston Harbor means to them. There were 1,593 entries total (1,381 posters and 212 writing entries).

Industrial, Commercial, and Institutional Audits and New Technologies

MWRA has found that conservation initiatives for industrial, commercial, and institutional water users are widely available through private consulting firms and via the web. MWRA developed and offers at no cost a 52 page Guide to Water Management that contains detailed information to help local facility managers reduce overall water use. In addition, detailed fact sheets on industrial, commercial, and institutional water users are available on MWRA's web site at <http://www.mwra.com/04water/html/indust.htm>. These include specifics on hospitals, schools, colleges and athletic facilities, restaurants, and commercial buildings.

Water Supply Citizens Advisory Committee

MWRA's 1986 decision to aggressively pursue water conservation rather than look for additional sources of water was strongly advocated by the Water Supply Citizens Advisory Committee (WSCAC). This unique citizen group was formed in 1977 to review a proposed Connecticut River water diversion plan to supply water to the metropolitan Boston area. From its beginning, the group has been a strong supporter of water conservation measures and helped formulate the water conservation language in MWRA's Enabling Act legislation. In 1986, WSCAC encouraged MWRA to pursue demand management rather than look for new water supplies. During the late 1980's and early 1990's, the citizen group promoted trigger and drought management planning. With its long commitment to the water supply system, WSCAC continues to provide independent citizen input on MWRA's policies and programs, while voicing public support of source protection and conservation. During FY22, the Water Supply Citizens Advisory Committee has continued to support MWRA's water conservation efforts. The committee has been active providing review and input on water system expansion issues. A one-year contract for continuation of WSCAC was authorized by the MWRA Board of Directors on June 22, 2022.

4. Demand Management Plans for Fiscal Year 2023

During FY23, MWRA plans to continue its demand management efforts at a similar level as FY22. MWRA's long-range planning, leak detection, system rehabilitation, water conservation and educational outreach programs have long been established as essential components of demand management. The MWRA Community Support Program will continue to work with both water and sewer member communities to foster water conservation activities and help minimize wastewater flow.
