

# METROPOLITAN WATER TUNNEL PROGRAM

## NOTICE TO ABUTTERS

---

---

### BROOKLINE

The Massachusetts Water Resources Authority (MWRA) will be conducting field work to support a major water supply tunnel program in the Metropolitan Boston Area. The two proposed water tunnels will improve reliability for our water infrastructure and allow our aging existing water tunnel system to be rehabilitated without interrupting service.

As part of the design effort, MWRA has hired GEI-MJA JV and other firms to perform test borings to study existing geological conditions. Test borings will be drilled to collect rock core samples, and to conduct geophysical logging and permeability testing. Piezometers may be installed within selected boreholes to measure groundwater levels.

The site activities will include installation of temporary construction fencing and erosion and sedimentation controls around the work area to provide working space for a drill rig, support trucks, equipment, and material storage. At each of these locations, the work is estimated to take about 6 to 8 weeks, including site set-up and breakdown. Upon completion of site activities, our crews will restore the work site.

MWRA has planned for three test borings on the Robert T. Lynch Municipal Golf Course property. All work will be outside of roadways and private property.

Work is scheduled to begin with preliminary equipment setup during the week of December 16, 2024, and the anticipated start of exploratory drilling is during the week of January 6, 2025, weather dependent. Work hours are typically between 7:00 a.m. and 5:00 p.m., Monday through Friday. Construction Zone Safety Plans will be implemented to ensure worker and general public safety in each area.
