

METROPOLITAN WATER TUNNEL PROGRAM

NOTICE TO ABUTTERS

NEEDHAM

The Massachusetts Water Resources Authority (MWRA) will be conducting field work to support a major supply tunnel program in the Metropolitan Boston Area. The two proposed water tunnels will improve reliability for our water infrastructure and allow our aging, existing water tunnel system to be rehabilitated without disrupting service.

As part of the design effort, the MWRA has hired WSP and their subcontractors to perform test borings to study subsurface conditions. Test borings will be drilled to collect samples of soil, rock, and groundwater.

The site activities will include the installation of erosion and sedimentation controls around the work area as well as traffic control signs to allow space for a drill rig, support trucks, and material storage.

MWRA has planned for three (3) test borings and vacuum excavation activities on Charles Street between Arlington Road and 77 Charles Street, and at 161 Highland Avenue. The work is estimated to take approximately two (2) weeks, including site set-up and breakdown. Upon completion of site activities, our crews will restore the work site.

Work is scheduled to begin during the week of October 20, 2025, weather dependent, and occur typically between 7:00 AM and 5:00 PM, Monday through Friday. Construction Zone Safety Plans will be implemented to ensure worker and general public safety.

If you have any concerns or questions, please contact:
