METROPOLITAN WATER TUNNEL PROGRAM

NOTICE TO ABUTTERS

BOSTON

The Massachusetts Water Resources Authority (MWRA) will be conducting field work to support a major supply tunnel program in the Metropolitan Boston Area. The two proposed water tunnels will improve reliability for our water infrastructure and allow our aging, existing water tunnel system to be rehabilitated without disrupting service.

As part of the design effort, the MWRA has hired WSP and their subcontractors to perform test borings to study subsurface conditions. Test borings will be drilled to collect samples of soil, rock, and groundwater, conduct geophysical logging, and to conduct infiltration testing.

The site activities will include the installation of perimeter safety fencing, and erosion and sedimentation controls around the work areas, as well as traffic control signs to allow space for a drill rig, support trucks, and material storage.

MWRA has planned 18 test borings and utility clearance activities, in an area bounded to the north by 430 Canterbury Street, 450 Canterbury Street, and Canterbury Lane; to the east by Morton Street; to the south by West Main Street off Morton Street; and to the southwest by 500 Canterbury Street. The work is estimated to take approximately two (2) to three (3) months, including site set-up and breakdown. Upon completion of site activities, our crews will restore the work site.

Work is scheduled to begin during the week of April 6, 2026, weather dependent, and occur typically between 7:00 AM and 5:00 PM, Monday through Friday. Construction Zone Safety Plans will be implemented to ensure worker and general public safety.
