# METROPOLITAN WATER TUNNEL PROGRAM

## NOTICE TO ABUTTERS

---

---

### WALTHAM

The Massachusetts Water Resources Authority (MWRA) will be conducting field work to support a major water supply tunnel program in the Metropolitan Boston Area. The two proposed water tunnels will improve reliability for our water infrastructure and allow our aging, existing water tunnel system to be rehabilitated without disrupting service.

As part of the design effort, the MWRA has hired WSP and their subcontractors to perform test borings to study subsurface conditions. Test borings will be drilled to collect samples of soil and rock.

The site activities will include the installation of temporary erosion and sedimentation controls around the drilling work area to provide working space for a drill rig, support trucks, equipment, and material storage. At this location, the work is estimated to take approximately one (1) week, including site set-up and breakdown. Upon completion of site activities, our crews will restore the work site.

MWRA has planned for one (1) test boring and vacuum excavation/hand digging activities south of Stanley Elementary School (250 South Street), east of the Brandeis Gosman Sports and Convocation Center property (415 South Street), and adjacent to the City of Waltham South Street Pumping Station (222 South Street).

Work is scheduled to begin during the week of July 13, 2026, weather dependent, and occur typically between 7:00 AM and 6:00 PM, Monday through Friday. Construction Zone Safety Plans will be implemented to ensure worker and general public safety.
