

METROPOLITAN WATER TUNNEL PROGRAM

NOTICE TO ABUTTERS

WALTHAM

The Massachusetts Water Resources Authority (MWRA) will be conducting field work to support a major supply tunnel program in the Metropolitan Boston Area. The two proposed water tunnels will improve reliability for our water infrastructure and allow our aging, existing water tunnel system to be rehabilitated without disrupting service.

As part of the design effort, the MWRA has hired WSP and their subcontractors to perform test borings and test pits to study subsurface conditions. Test borings will be drilled to collect samples of soil, rock, and groundwater. Test pits will be dug to collect soil samples and to conduct infiltration testing.

The site activities will include the installation of erosion and sedimentation controls around the work area and allow space for a drill rig, support trucks, and material storage.

MWRA has planned for two (2) test borings, two (2) test pits, and vacuum excavation activities on the lot with an address of 167-173 School Street in Waltham. The work is estimated to take approximately two (2) to four (4) weeks, including site set-up and breakdown. Upon completion of site activities, our crews will restore the work site.

Work is scheduled to begin during the latter part of the week of July 20, 2026, weather dependent, and occur typically between 7:00 AM and 5:00 PM, Monday through Friday. Construction Zone Safety Plans will be implemented to ensure worker and general public safety.

If you have any concerns or questions, please contact:
